

# Blood Collection Point and Laboratory Tests at Policlinico San Marco

At Policlinico San Marco, a Blood Collection Point service is available, accessible both through the National Health Service (Servizio Sanitario Nazionale - SSN) and privately.

To provide the requested services, the Laboratory relies on a complex technological infrastructure that is constantly updated, improved, and verified. The services provided by the Analysis Laboratory are based on a system of certified processes and controls.

## Blood Collection Point

The Blood Collection Point at Policlinico San Marco is located in the structure of the Central Booking Center adjacent to the concierge at Corso Europa 7, Osio Sotto BG.

It is open from Monday to Saturday from 7:30 AM to 9:00 AM without an appointment.

## List of Services

The laboratory at Policlinico San Marco performs analyses in Clinical Pathology, Microbiology, and Virology. Through agreements with other laboratories, it guarantees services for non-accredited branches, for which it can ensure proper collection, storage, and transport.

The agreements are with the following institutions:

- Policlinico San Pietro, Viale Forlanini 15, Ponte San Pietro, Bergamo
- San Raffaele Hospital in Milan, via Olgettina 60, Segrate, Milan
- IRCCS Galeazzi – Sant’Ambrogio Hospital, via Cristina Belgioioso 173, Milan
- Synlab Italia Laboratory – Via Martiri delle Foibe 1, Monza

For the list of available services, execution location, and reporting times, [click here](#).

## Preparation Instructions

Most tests do not require special preparation, except for **fasting for 8 hours** before the blood draw.

Preparation or sample collection instructions for tests requiring specific preliminary indications for the patient are included in the specific test preparation sheets, which can be consulted by [clicking here](#).

For further inquiries, it is possible to contact the laboratory secretariat by email or phone during working hours (035.886.218 - [laboratorioanalisi.psm@grupposandonato.it](mailto:laboratorioanalisi.psm@grupposandonato.it)).

If the biological sample sent to the Laboratory does not meet the **\*\*acceptance criteria\*\*** (e.g., coagulated sample, hemolyzed sample, insufficient sample, or inappropriate collection container), the laboratory secretariat will inform the patient to proceed with a new sample collection and delivery.

Considering that the use of appropriate containers for the home collection of biological materials (swabs, urine, stool, etc.) is essential to ensure adequate quality of analytical services, Policlinico San Marco, through its blood collection point, provides these containers free of charge to outpatients upon presentation of a medical prescription.

## Service Information

Pregnant women, disabled individuals, and patients who need to undergo a glucose and/or insulin tolerance test or glycemic profile have priority. Upon entry, they should select letter "E" at the ticket machine.

For the glucose and/or insulin tolerance test, it is necessary to arrive no later than 8:00 AM, selecting priority by choosing the letter "E" at the entrance.

Some tests cannot be performed on Saturdays, on the eve of holidays, and on December 6th (see list).

## Report Delivery

Reports, digitally signed and viewable online through the Regional Services Card (FSE), are made available depending on the type of test.

For residents of the Lombardy Region, it is possible to consult the results by logging into [www.regione.lombardia.it](http://www.regione.lombardia.it) with personal credentials and accessing the Electronic Health Record.

It is also possible to access the reports without going to the facility via:

- The GSD APP
- By connecting to the Online Services Area by [clicking here](#)
- By accessing the online report consultation area by [clicking here](#) and entering the user code (fiscal code) and the password initially provided at reception.

A printed copy of the report can also be collected in person at the blood collection sites, according to the date and time slot indicated on the laboratory test report collection form, printed and delivered during administrative reception.
